

# Global Warming Not a Joke

Earth's global average surface temperature in 2020 tied with 2016 as the hottest year on record, continuing a long-term warming trend due to human activities.

Carbon dioxide in the atmosphere warms the planet, causing climate change. Human activities have raised the atmosphere's carbon dioxide content by 50% in less than 200 years.

Global sea levels are rising as a result of human-caused global warming, with recent rates being unprecedented over the past 2,500-plus years.

## Solution

### R3

Reduce, Recycle, Reuse

### Green Land

Plant a tree

### Fuel Efficiency

Use an electric car or a hybrid one

### Walk, Bike, Carpool

Reduce carbon footprint from vehicles

### Air Conditioner

Clean or replace dirty air conditioner filters as recommended

### Turn off

Turn off electric appliances when they are not in use, don't leave them plugged in

"Climate change is the single biggest health threat facing humanity, and health professionals worldwide are already responding to the health harms caused by this unfolding crisis."
